Work History

Application Developer at Maritz, MO *July 2024 to Current*

- Engineered scalable enterprise web applications using Angular, TypeScript, JavaScript, HTML, and CSS, simplifying complex business workflows and improving user experience.
- Led a 4-engineer team, establishing engineering standards, Agile workflows, and reusable architectural patterns that improved delivery consistency and velocity.
- Championed AI adoption by architecting a custom MCP server in C#, enabling AI-assisted end-to-end debugging across application, API, and SQL database layers for the engineering team.
- Developed an AI-powered CLI using Node.js, TypeScript, and OpenAI APIs that automated event provisioning and streamlined developer workflows.
- Defined AI governance standards and mentored cross-functional teams on responsible AI adoption and developer best practices.
- Partnered with leadership to identify migration bottlenecks, implementing AI-enabled workflows and automation that reduced time spent migrating documentation by hand.

Full-Stack Web Developer at Convention Data Services, MA *May 2023 to July 2024*

- Engineered enterprise registration platforms using ASP, PHP, TypeScript, JavaScript, and SQL Server supporting events with 100K+ attendees.
- Developed REST APIs and backend services in ASP and PHP following object-oriented design principles (OOP).

Full-Stack Web Developer at Imaginal Marketing Group, LA *June 2021 to May 2023*

- Developed accessible, SEO-optimized web applications using PHP, Twig, and JavaScript, improving Core Web Vitals and search performance.
- Built a Python automation tool that monitored website health, reducing support tickets by 50%.
- Architected a mobile-first SvelteKit application with personalized recommendations that increased product sales.
- Designed REST APIs integrating frontend applications with backend services and SQL databases.
